OpenCloning: open-source DNA engineering you can automate

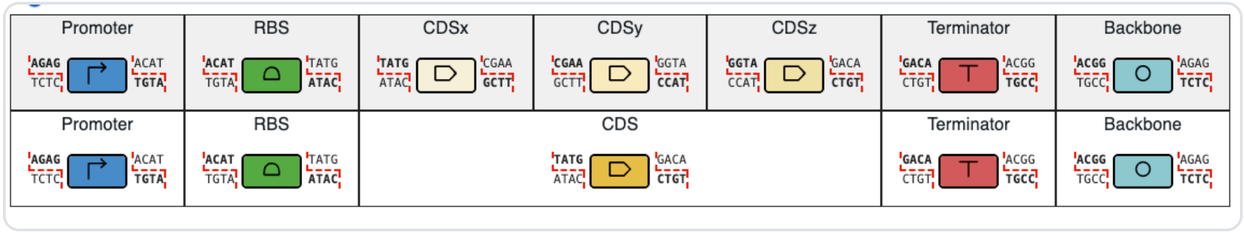

Design in the browser or script it in Python

- SnapGene methods **+** HDR, CRISPR, IVA, Cre/Lox, phage rec.
- Every step is recorded and linked to sequencing data.
- Same output in website and scripts.

The best Golden Gate tool

- **Define your syntax once**, load plasmids and pick from dropdowns
- Every combination documented, fully scriptable, automation-ready

OpenCloningDB: manage your whole collection

- Sequences, oligos, strains and sequencing data in one place, connected by provenance
- **Pilot labs wanted**
